FibraTape

Extreme Environment Drywall Tape

For Rapid Temperature Changes During Drywall Installation

- **Extreme tack** – More glue for a better grip to help keep tape secure in humid or cold environments.
- **Extreme humidity** – Adheres in environments up to 60% relative humidity.
- **Extreme temperatures** – Performs in 5°-35°C.
- **Increased strength** – Tough fiberglass increases joint strength and structural integrity.
- **Fiberglass mesh** – Creates a high strength, seamless surface that's easy to conceal.
- **Smooth finish** – Eliminates blisters and bubbles commonly found with paper tapes.

This innovative drywall tape provides a secure grip in extreme temperature conditions. At many jobsites, rooms start the day cold and are then warmed as work begins. These thermal extremes combine to create a moist, humid environment. Unlike most tapes, FibraTape® Xtreme is uniquely designed to adhere to cold walls and maintain a strong tack as humidity levels increase.

Stronger ideas for a sustainable world

Innovative solution for better grip in extreme temperature conditions

FibaTape® Xtreme Performance Features

- Tape remains in place when exposed to rapid temperature changes during drywall installation.
- Ready for use any time after drywall installation.
- Save time and money—self-adhesive application requires no embedding coat.
- Durable fiberglass means less cracking.
- Eliminates blisters and bubbles.

Available in 20 m x 48 mm and 90 m x 48 mm rolls.

FibaTape® offers a full line of products for wall finishing

The FibaTape® family of products includes a complete range of innovative drywall joint tapes and cracks repair products, each offering strength, flexibility, easy installation and considerable cost savings. By focusing product development on contractor needs, FibaTape has become the brand professionals turn to for quick and easy drywall finishing and repair solutions.
